

Our Passion for Flavour & Fragrance Ingredients

Gilles Oddon, Firmenich SA, Route des Jeunes 1, PO Box 239, CH-1211 Geneva 8

Providing innovative ingredients to our own creative talents as well as to the F&F industry has been at the forefront of Firmenich's success for the past 100 years. Our current ingredient portfolio constitutes the most diverse palette in the industry and is designed to tackle even the most stringent sustainability standards. To maintain our leadership, the "Firmenich culture of innovation" – the mindset, expertise – is inherently coupled to the success of our sustainability efforts. Green Chemistry offers a strategic pathway to improve the sustainability of our chemical processes. Among the 12 Principles of Green Chemistry, catalysis plays a central role: it leads to improvements in yield, reduction of energy consumption, process safety and minimisation of toxic waste production. During this talk, we will illustrate the use of catalysis in the field of F&F ingredients.
